Kindly read the enclosed History, Description and cultural Directions. They are very interesting.

**TERMS**—Cash must accompany all orders; shipments C. O. D.  
Packing charges at cost.

The approximate date for shipping will be from October 15th to January 1st depending entirely on weather conditions.

### SHIPPING INSTRUCTIONS

Orders will be filled strictly in rotation as they are received. In view of the fact that these Lilies are limited in quantity, all orders will be taken subject to crop conditions.

These Regale Lilies cut first week of April 1927

(See Page 4 for forcing information)

## LILIUM REGALES FOR EASTER

The vase of Regale blooms pictured on page 3 dispels all argument against Regales for forcing purposes. These blooms were produced from No. 2 size bulbs planted in beds where Chrysanthemums were cut from in the late Fall. Both root action and top growth were permitted to start at the same time, the temperature being kept as near sixty as possible.

These Regales were finished in the same house with Giganteums. They were planted in the beds about four inches deep and four inches apart in rows twelve inches apart. Of course, these Lilies bloom unevenly, being a Hybrid it will take a great many years to select a strain of bulbs that will give even blooming.

You may also plant these bulbs in four inch pots, plunging the pots in a bed. In this way you can control the forcing conditions much better as you can move the more forward plants to cooler temperature and the more backward plants to a higher temperature. This will also allow you to use this four inch pot stock for making up in large pans or baskets.
